

PRESS RELEASE

FOR IMMEDIATE RELEASE

Part #: 7806

Description: Lowered C10 Rear Sway Bar

MSRP: \$438.95

Application: 1973-83 Chevrolet C10/C20 2wd with a 3-5" Drop

For race, show or daily driving applications, the lowered C10 is king. For this reason, Hellwig released not only a stock height rear sway bar but an application made specifically for lowered vehicles as well. This 1-1/8" heat treated sway bar fits vehicles with a 3-5" rear drop. The bar has a 3 hole design allowing the rate to be adjusted to the driving style of the owner or the specific track or course it's being run on. For the guys running heavy duty rear ends, this kit includes U-bolts and brackets to let it fit on axles with both 3.0" and 3.5" diameter tubes. This also accommodates C20 pickups. The adjustable end links let you perfectly match the bar to your specific suspension. This bar will keep the vehicle tight through the corners for better handling, performance, fun and quicker lap times!

For even better performance, pair this rear sway bar with Hellwig's new lowered front sway bar (P/N 7804). They also offer stock height applications.

Product Attributes:

Lifetime Warranty on All Steel Parts
